

Technocracy Rising: The Trojan Horse of Global Transformation – Talking Points

The dark horse of the New World Order is not Communism, Socialism or Fascism: It is Technocracy.

Author: Patrick M. Wood, 2014

What is Technocracy?

In a nutshell, Technocracy is a utopian economic system that started in the 1930s and that discards price-based economics in favor of energy or resource-based economics. Technocrats demanded that control over society be given to them instead of elected officials. It is key to understand that it was an economic model designed to completely replace capitalism. Technocracy would result in a totalitarian state, ending national sovereignty and personal liberty.

What do you mean by “global transformation”

The three pillars of society – Economics, Politics and Religions – are being simultaneously transformed into a state of Technocracy. Europe and China are already largely converted, and the European Union is a good example. Both are run by unelected and unaccountable regulators who exercise god-like control over their respective regions.

Who is responsible for this transformation?

The Trilateral Commission, its members and their globalist cronies are the principal drivers for Technocracy. This is demonstrated by their key roles in creating Sustainable Development, Agenda 21, the creation of the European Union and the restructuring of China into an economic powerhouse.

Didn't you write about the Trilateral Commission and Globalism back in the 70s and 80s?

Yes. The late Antony Sutton and myself co-authored *Trilaterals Over Washington*, Volumes I and II, in 1979, and wrote the monthly newsletter, *Trilateral Observer*, for several years. Sutton had been a research fellow at Stanford University's well-known Hoover Institution for War, Peace and Revolution. Together, we were considered the de facto experts on Trilateral policies as they were being implemented in the United States and around the world.

What is the “green economy”?

This is the heartbeat of Technocracy – the U.N. defines it as a “decoupling of resource use from economic growth”, which is actually an oxymoron, but is what is happening. Principles of Sustainable Development now take precedence over traditional economic and political policies. The pseudo-science of Sustainable Development affects every area of society and its functions.

How is government being “reinvented”?

Traditional government based on geography and local control are being replaced by what early Technocrats called “Functional Sequences.” The best modern examples of this include health care (Obamacare), control over water (Army Corps of Engineers), land (Councils of Governments), agricultural practices (Bureau of Land Management), education (Common Core), energy (Department of Energy, Smart Grid), transportation (Metropolitan Planning Organizations), emergency management (FEMA) and so on. This modern reinvention of government started in

1993 when President Bill Clinton signed Executive Order 12862 formalizing the *National Performance Review*, which was later renamed the *National Partnership for Reinventing Government*.

What is Reflexive Law and why doesn't anyone know about it?

One legal journal stated, “*there is no doubt that sustainable development needs new paradigms to transform it from visionary rhetoric to a viable political goal.*” Reflexive Law is a pseudo-legal system designed to implement Sustainable Development, Agenda 21 policies, public-private partnerships, regional government institutions, and so on. It is completely antithetical to hard law and the Western concept of the Rule of Law. Writings on Reflexive Law have been limited to professional legal journals, most of which originate in Germany.

What does Technocracy have to do with the creation of Smart Grid?

Two key requirements for Technocracy from the 1930s were: a) “Register on a continuous 24 hour-per-day basis the total net conversion of energy” and 2) “By means of the registration of energy converted and consumed, make possible a balanced load.” Smart Grid accomplishes this goal perfectly by integrating all remotely-controlled home appliances into the utility grid. Thus, it provides a means of complete control over the distribution and consumption of energy.

What about massive surveillance and data collection by the government?

Another specific requirement of early Technocracy was to “Provide specific registration of the consumption of each individual, plus a record and description of the individual.” A “scientific society’ cannot be run without comprehensive monitoring and control. The head of domestic surveillance is the Director of National Intelligence, which was founded and organized by Trilateral Commission member John Negroponte under President George Bush in 2005.

Was Aldous Huxley's book, *Brave New World*, speaking about Technocracy?

Yes. Huxley wrote this book in 1932 at the very peak of Technocracy fever in the United States and in Germany. It greatly inspired his belief that scientific dictatorship would result if the engineers and scientists of Technocracy were ever to take control of society.

Is Transhumanism related to Technocracy?

They are comparable to Siamese twins and both based on the philosophy of scientism. Technocracy seeks to transform society. Transhumanism seeks to transform humanity that comprises society. It is deeply religious in nature, seeking to use science to achieve immortality, omniscience and omnipotence. Transhumans view this as creating “Humans 2.0” and have stated openly that they have seized the reins of evolution to change the course of man's future.

How has evangelical Christianity been transformed to support Technocracy?

In 1984, the famed secular management consultant Peter Drucker teamed up with a rising Christian management consultant, Bob Buford. Drucker taught technocratic principles to the corporate world for decades before he introduced his beloved Communitarian philosophy to the Christian world. This began the modern megachurch movement in America, laid the groundwork for the “emerging church” movement, both based on principles of community organization run by trained community organizers. In the process, churches were transformed from a historic church model into a corporate business model. Megachurch giants Bill Hybels and Rick Warren were both early Drucker disciples. Buford's Leadership Network organization now influences tens of thousands of churches all around the world. Others organizations like it have also sprung up.
